OptiPerformer 8 Release Notes

IMPORTANT - PLEASE READ ME

Installation Notes and Known Issues

Installation:

- It is highly recommended that all previous versions of OptiPerformer be removed before starting the installation of OptiPerformer 8.0
- If the length of the installation directory path is too long, it can cause the installation to fail. To avoid this, it is recommended that you not exceed the length of the default installation path.
- During reinstallation, after removal of the application you may receive an error message. Simply click OK on the 'Installation Failed' screen, and proceed as normal.

Minimum hardware and software requirements:

- PC with Pentium 3 processor or equivalent
- Microsoft Windows XP, Windows Vista or Windows 7. 32-bit or 64-bit edition
- 400 MB free hard disk space
- 1024 x 768 graphic resolution, minimum 65536 colors
- 128 MB of RAM
- Internet Explorer 5.5 (or higher)
- DirectX 8.1 (or higher)

Application Execution:

- When running OptiPerformer under a Restricted User Profile, place all sample files in the Restricted User's folder, or wherever the user has Read/Write access. It may also be necessary to remove the Read-only flag from the file after the copy is made. This has to do with file permissions - OptiPerformer needs to open the file in a read/write mode.

Please contact your network administrator if you need assistance with this.

- In order for the OptiPerformer Online Help to function properly, Adobe Acrobat Reader must be installed. To get the latest version please visit the Adobe website at http://www.adobe.com/, or install from the version that is provided on the OptiPerformer Installation CD.
